Introducing STEERING AIDS

Steering Peg

Tetra-grip

Steering Ball

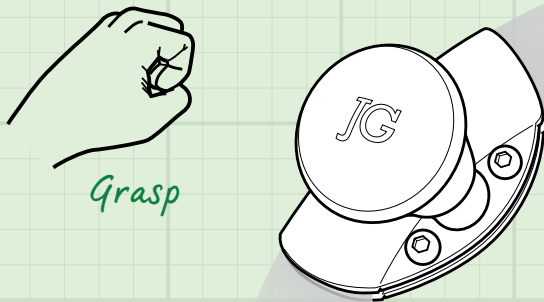

Driving Excellence

Jeff Gosling
Hand Controls Ltd.

Designed to aid one handed steering, this adaptation also assists drivers with limited arm or shoulder strength and reduces the force required to steer. Steering aids can be used independently or in conjunction with hand controls or a left foot accelerator.

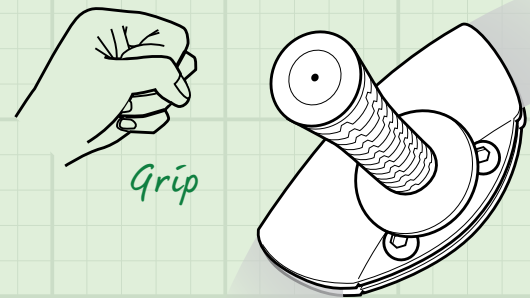

Ball:

The most commonly used steering aid, the steering ball is grasped from the front using a partially clenched hand. Available in standard or quick release versions.

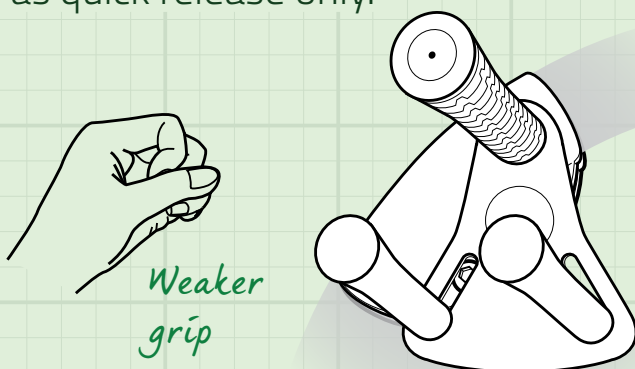

Peg:

The steering peg is grasped from the side using a partially clenched hand. Available as quick release only.

Tetra-grip:

The tetra grip is controlled by placing the wrist between two adjustable supports and fingers around the peg. Available as quick release only.

Quick-Release Operation

The quick release mechanism is operated by pushing the pin at the back of the steering aid and sliding out the handle.
